

# Ecological effects and management of invasive Lionfish in the Atlantic

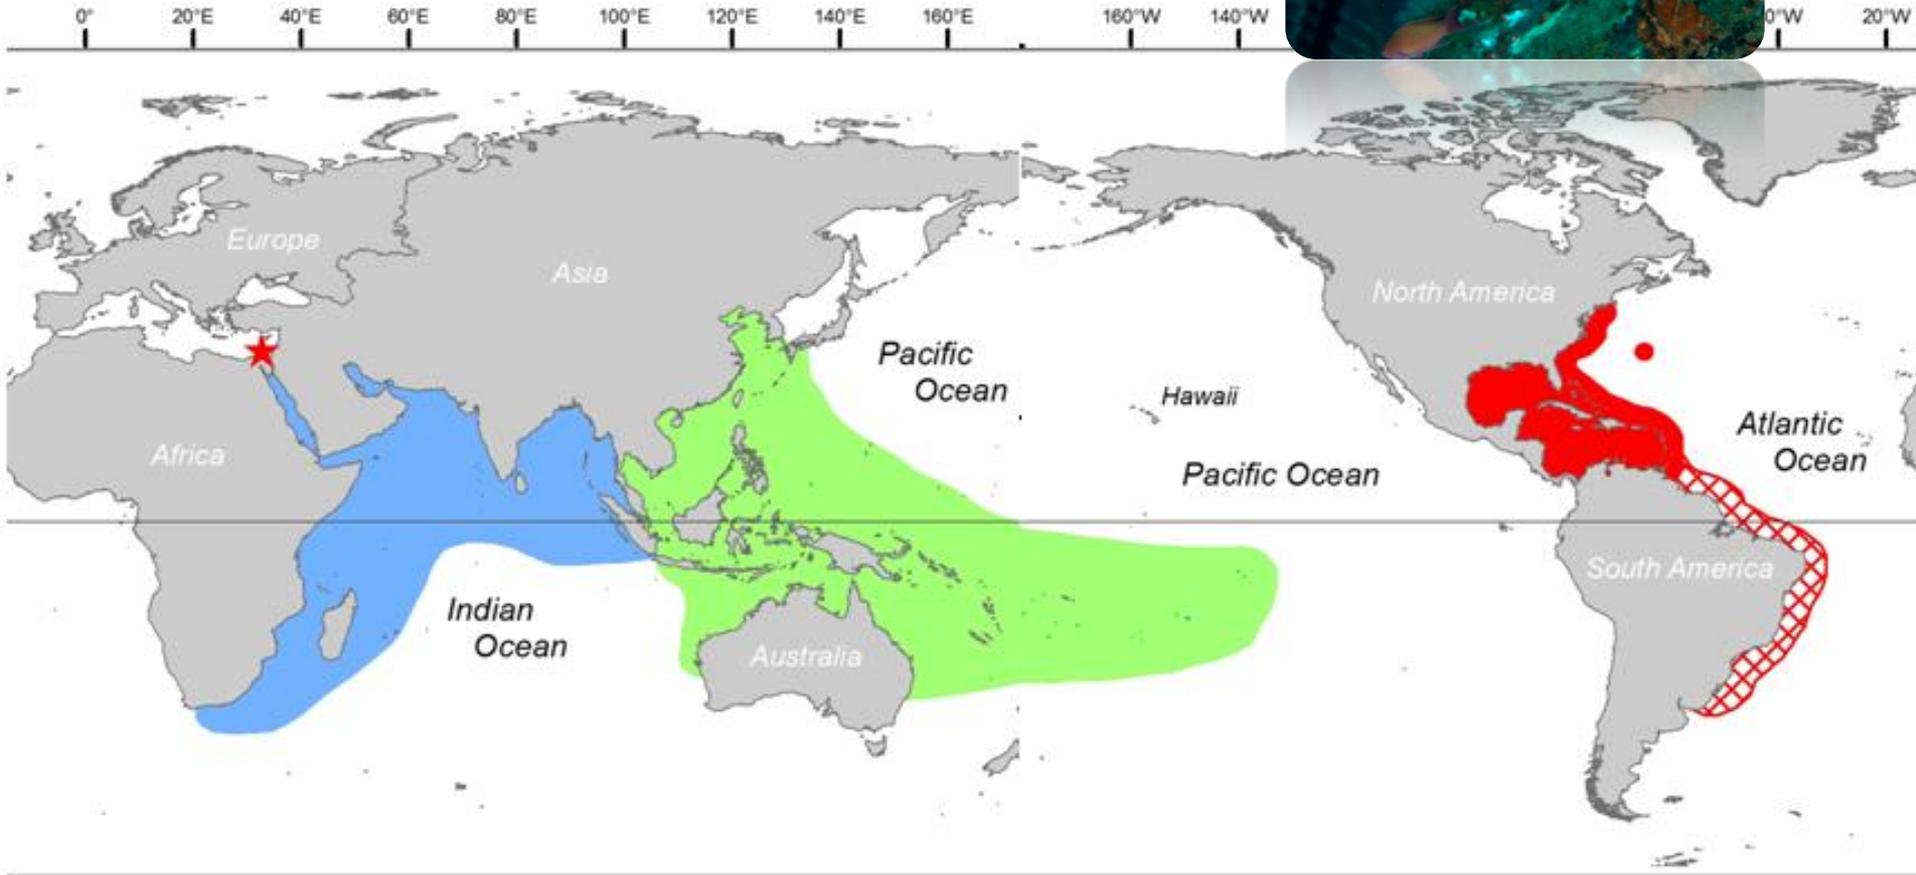

**Stephanie Green**

**David H. Smith Conservation Research Fellow  
Integrative Biology Department  
Oregon State University**

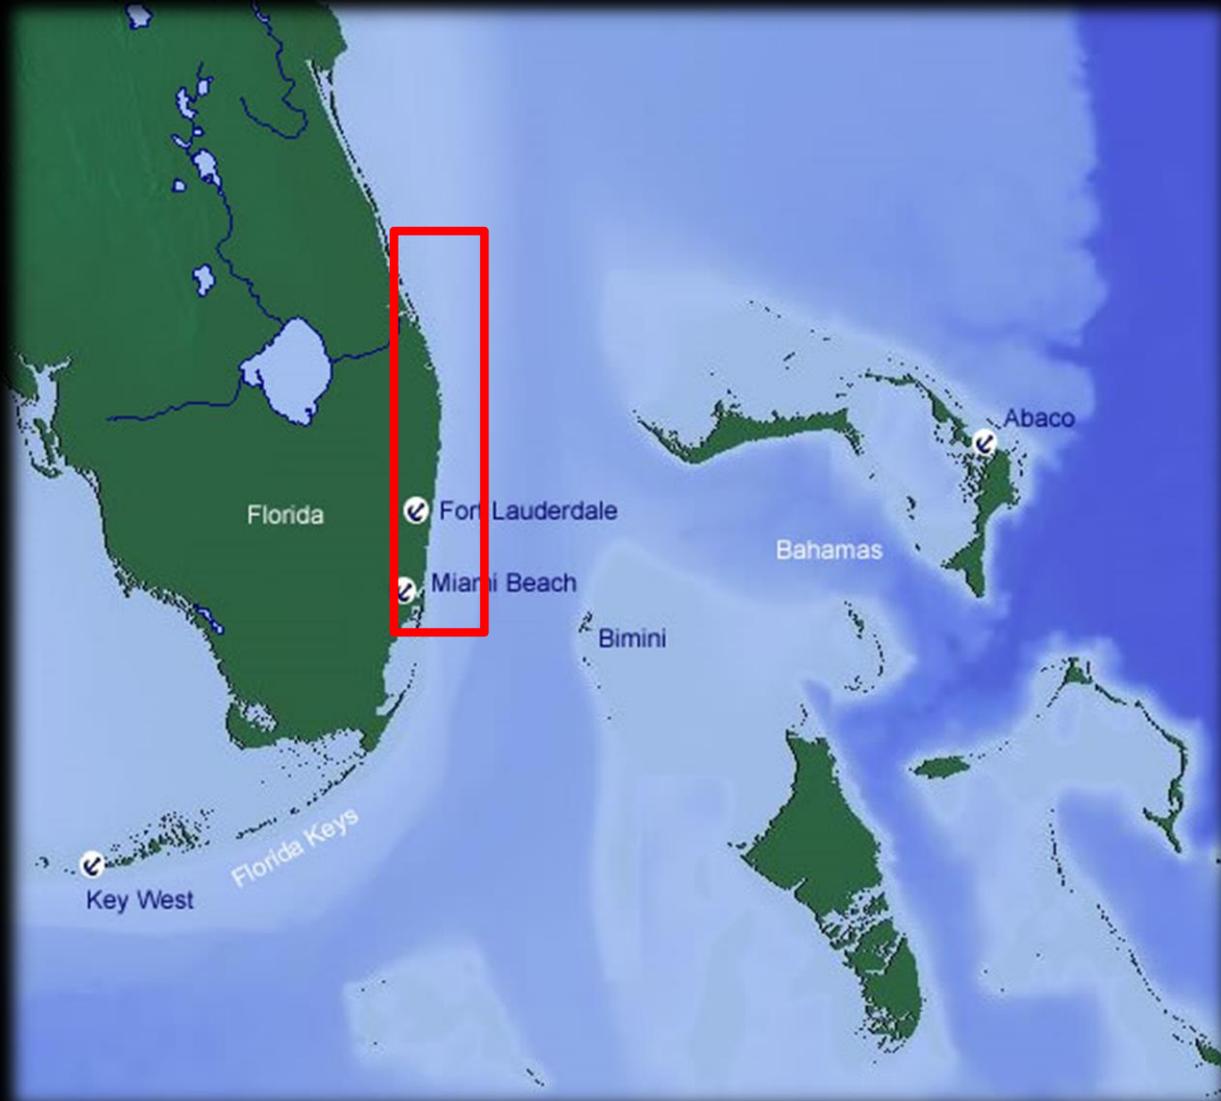

# Distribution

- Red Lionfish – *Pterois volitans*
- Devil Firefish – *Pterois miles*

# Source of the invasion

# Aquarium imports and non-native fish sightings

# Invasion progression

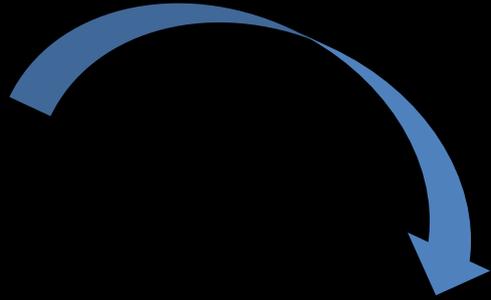

# Invasion progression

# Invasion progression

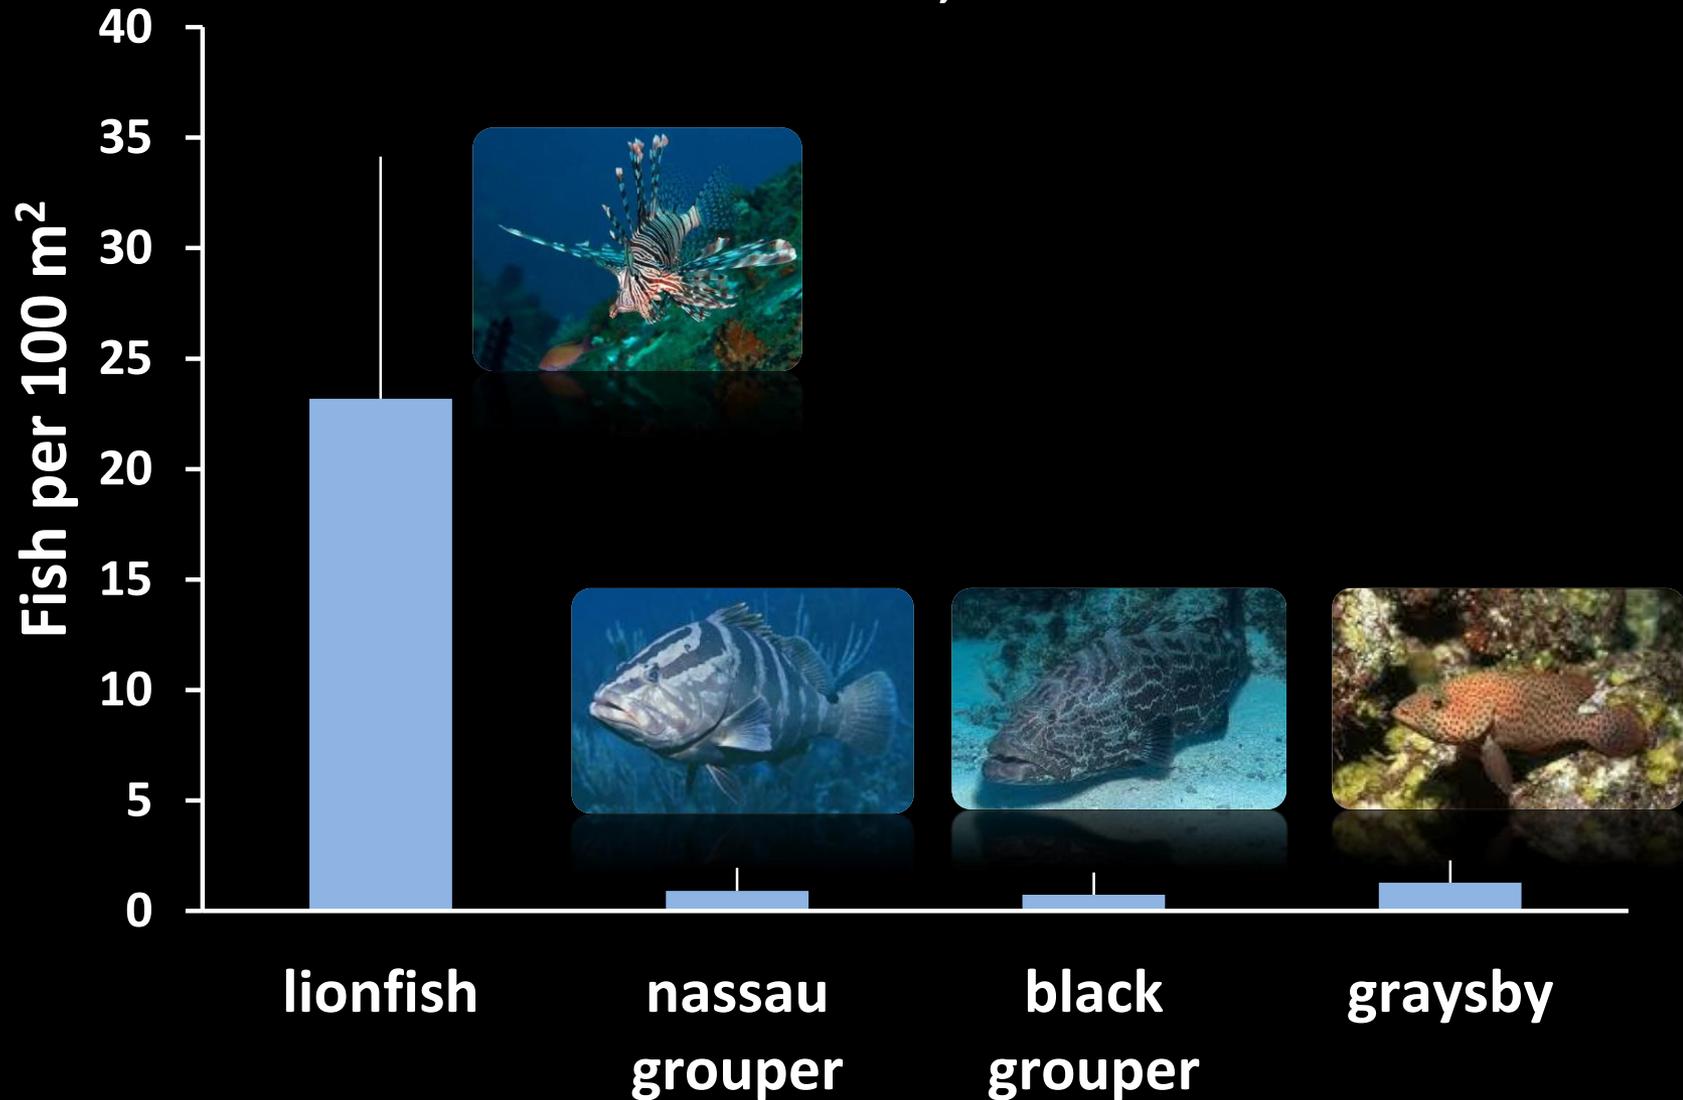

# Lionfish abundance has increased rapidly

# Relative predator abundance

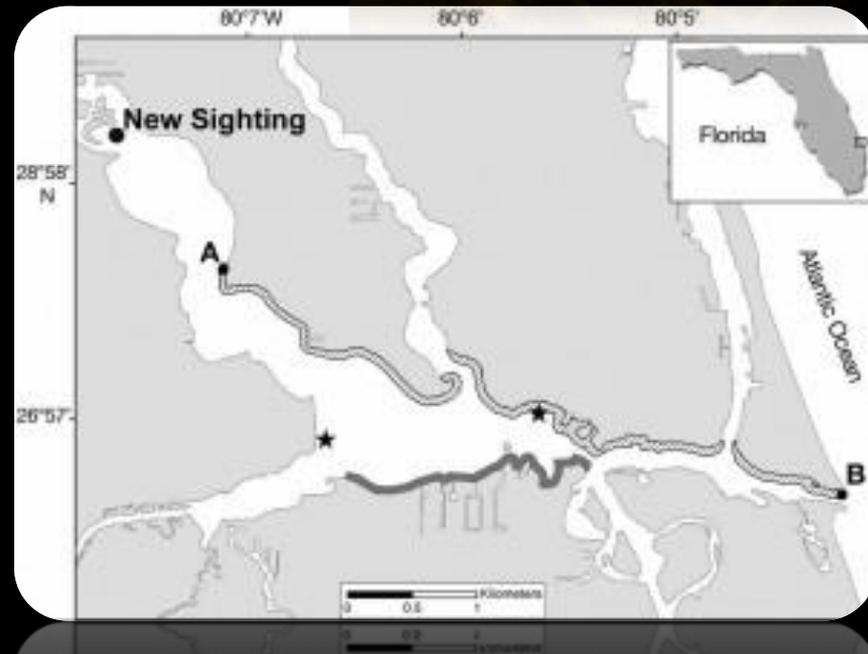

Eleuthera, Bahamas

# Potential lionfish range

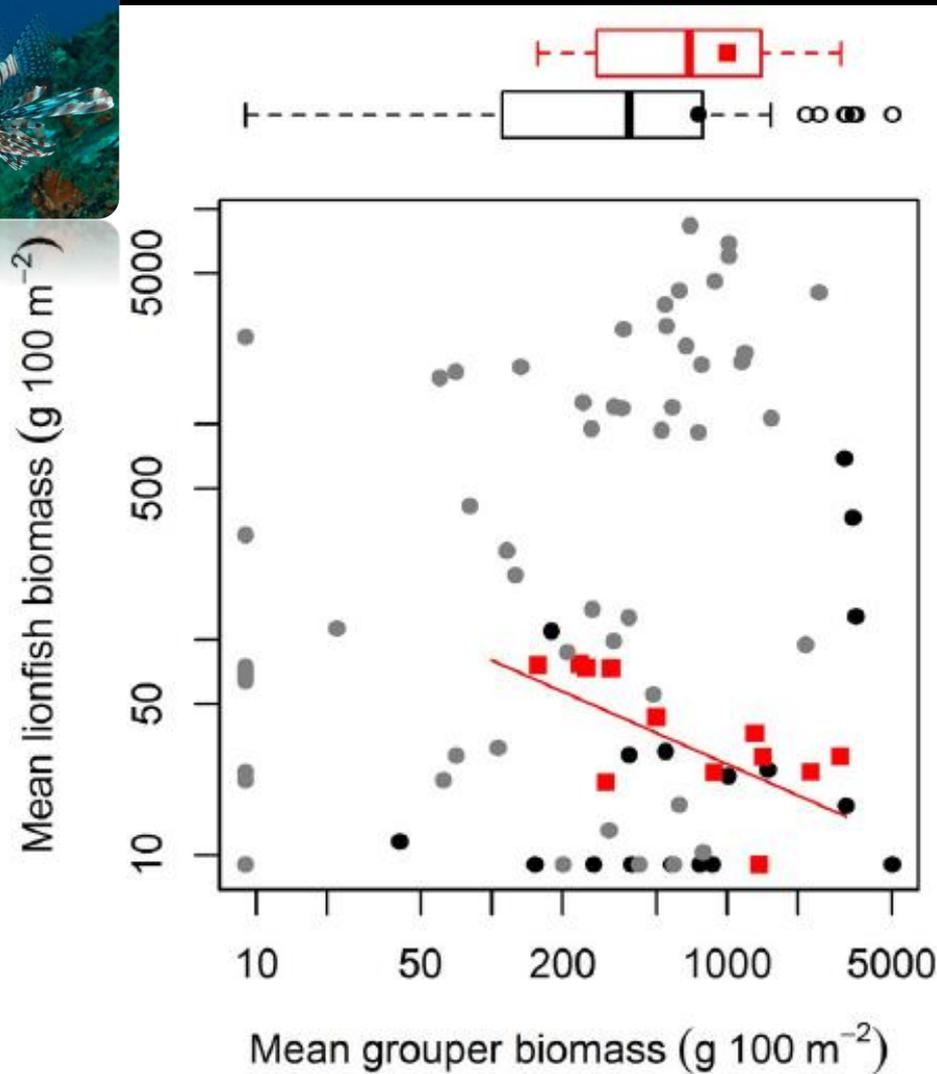

# Lionfish in the Loxahatchee River

# Predators do not control lionfish

# Gape-limited predators

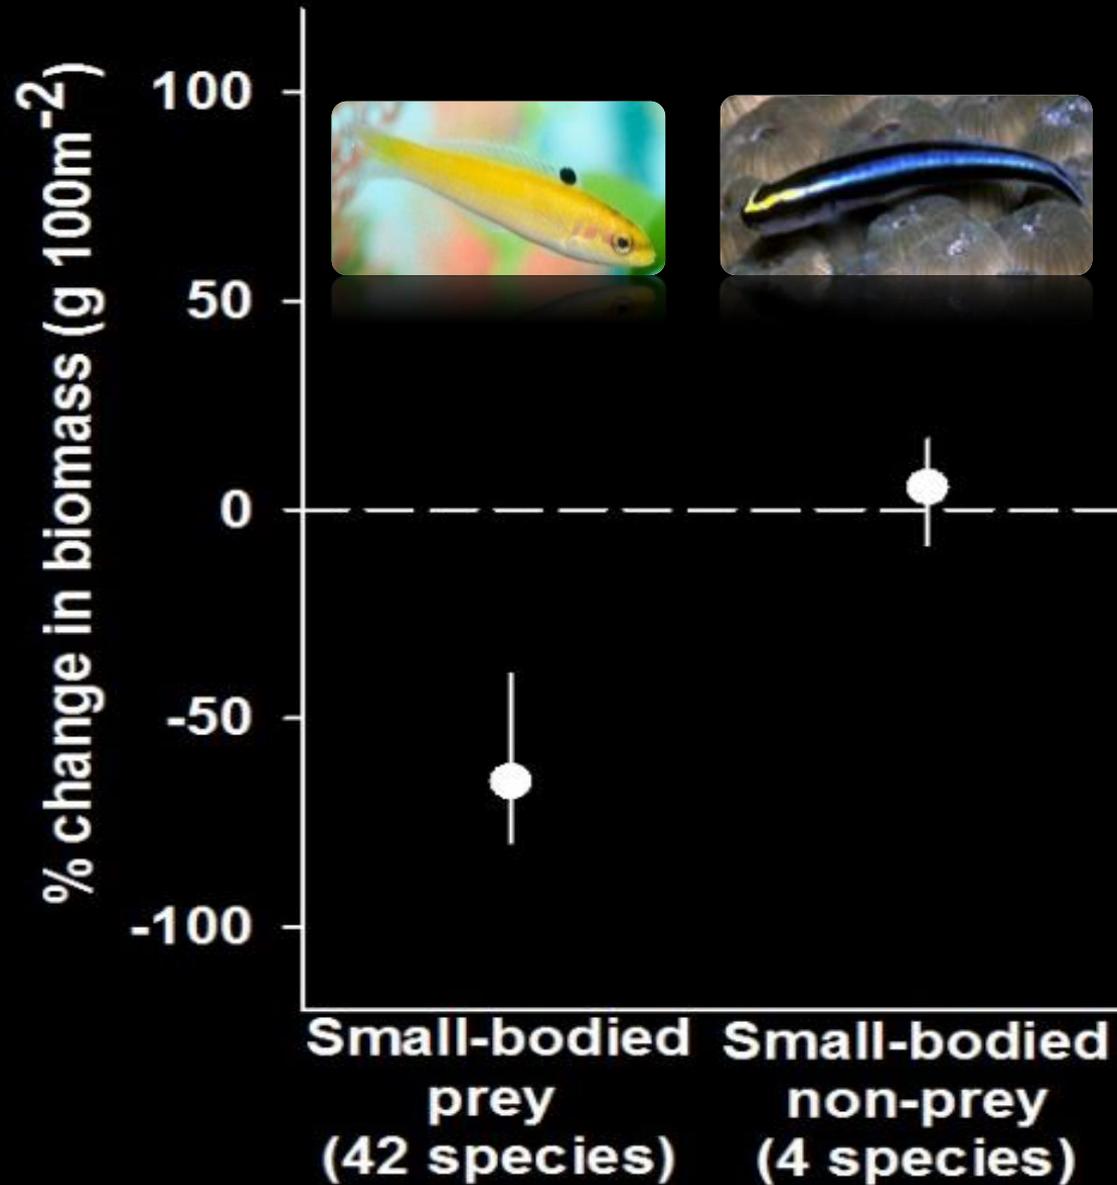

# Avoided

# Preferred

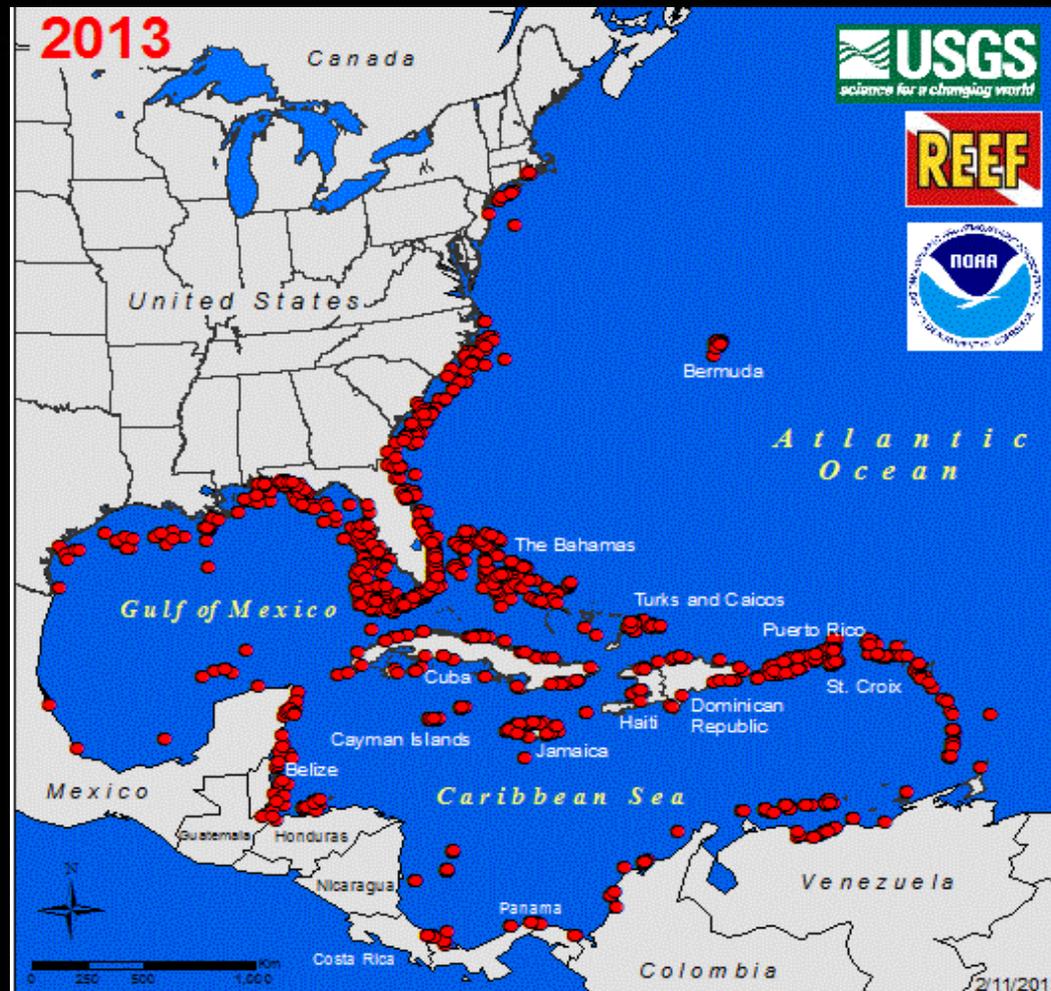

# 65% reduction in prey biomass over two years

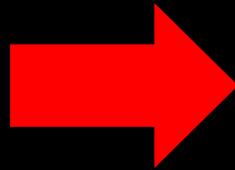

# What have we learned so far?

## Complete eradication is unlikely

# Controlling the lionfish invasion

~~Eradication~~

Population  
suppression

# Planning control

Minimize ecological impacts in priority areas

Juvenile fish habitat

Marine Protected Areas

# How many lionfish to remove?

**How many lionfish can a reef tolerate?**

# How many lionfish can a reef tolerate?

$$P - C = N$$

$$\begin{array}{rcc} \text{Prey fish} & & \text{Lionfish prey} \\ \text{production} & - & \text{consumption} \\ (\text{kg ha}^{-1}\text{yr}^{-1}) & & (\text{kg ha}^{-1}\text{yr}^{-1}) \\ & = & \\ & & \text{Net prey fish} \\ & & \text{production} \\ & & (\text{kg ha}^{-1}\text{yr}^{-1}) \end{array}$$

**Prey decline if  $N < 0$**

# How many lionfish can a reef tolerate?

$$\bar{N}_x = \underbrace{\frac{1}{z} \sum_{\forall z} \sum_{\forall i} \sum_{\forall v} \left( \frac{jW_{v,i,z}^q}{E} \right) W_{v,i,z}}_{\text{Prey fish production}} - \underbrace{\bar{d}_x \bar{W}_x \bar{p} (0.006 e^{0.16T} \bar{W}_x^c)}_{\text{Lionfish prey consumption}} y$$

# How many lionfish can a reef tolerate?

$$\bar{d}_x = \frac{\frac{1}{Z} \sum_{\forall z} \sum_{\forall i} \sum_{\forall v} \left( \frac{jW_{v,i,z}^q}{E} \right) W_{v,i,z}}{\bar{W}_x \bar{p} (0.006 e^{0.16T} \bar{W}_x^c) y}$$

Surveys of fish biomass

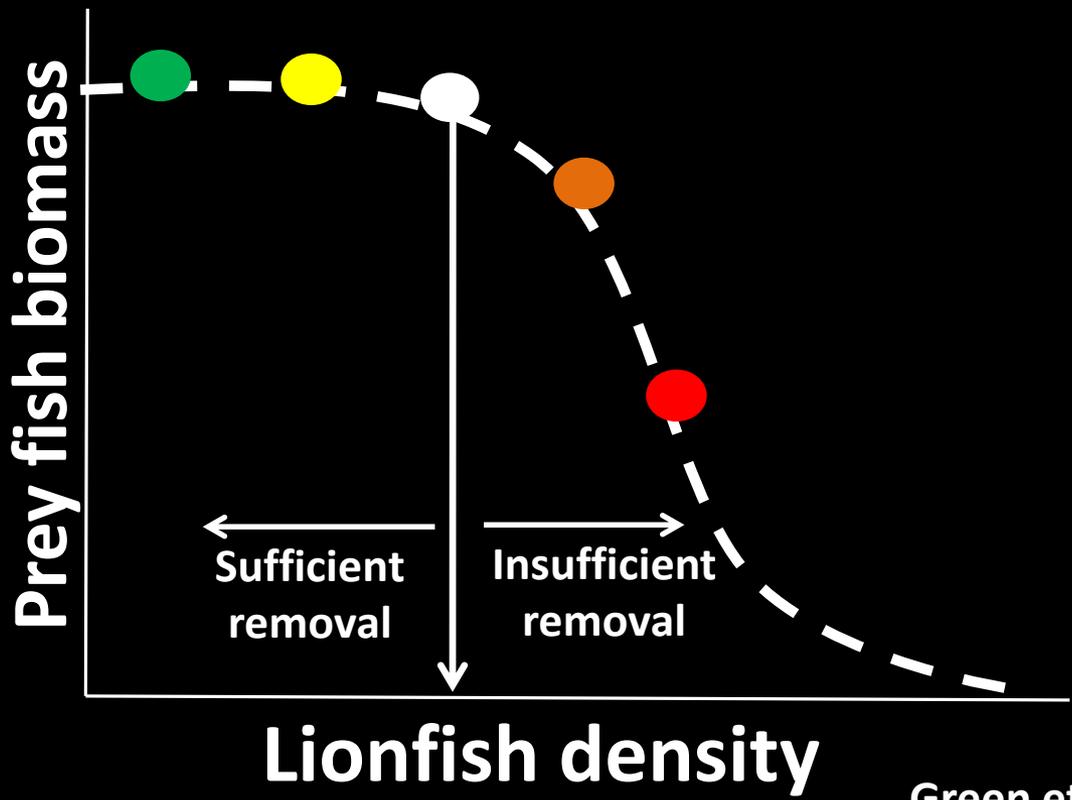

Predation rates

Lionfish densities  
and body sizes

# How many lionfish can a reef tolerate?

$$\bar{d}_x = \frac{\frac{1}{Z} \sum_{\forall z} \sum_{\forall i} \sum_{\forall v} \left( \frac{jW_{v,i,z}^q}{E e^{kT}} \right) W_{v,i,z}}{\bar{W}_x \bar{p} (0.006 e^{0.16T \bar{W}_x^c}) y}$$

# The Bahamas

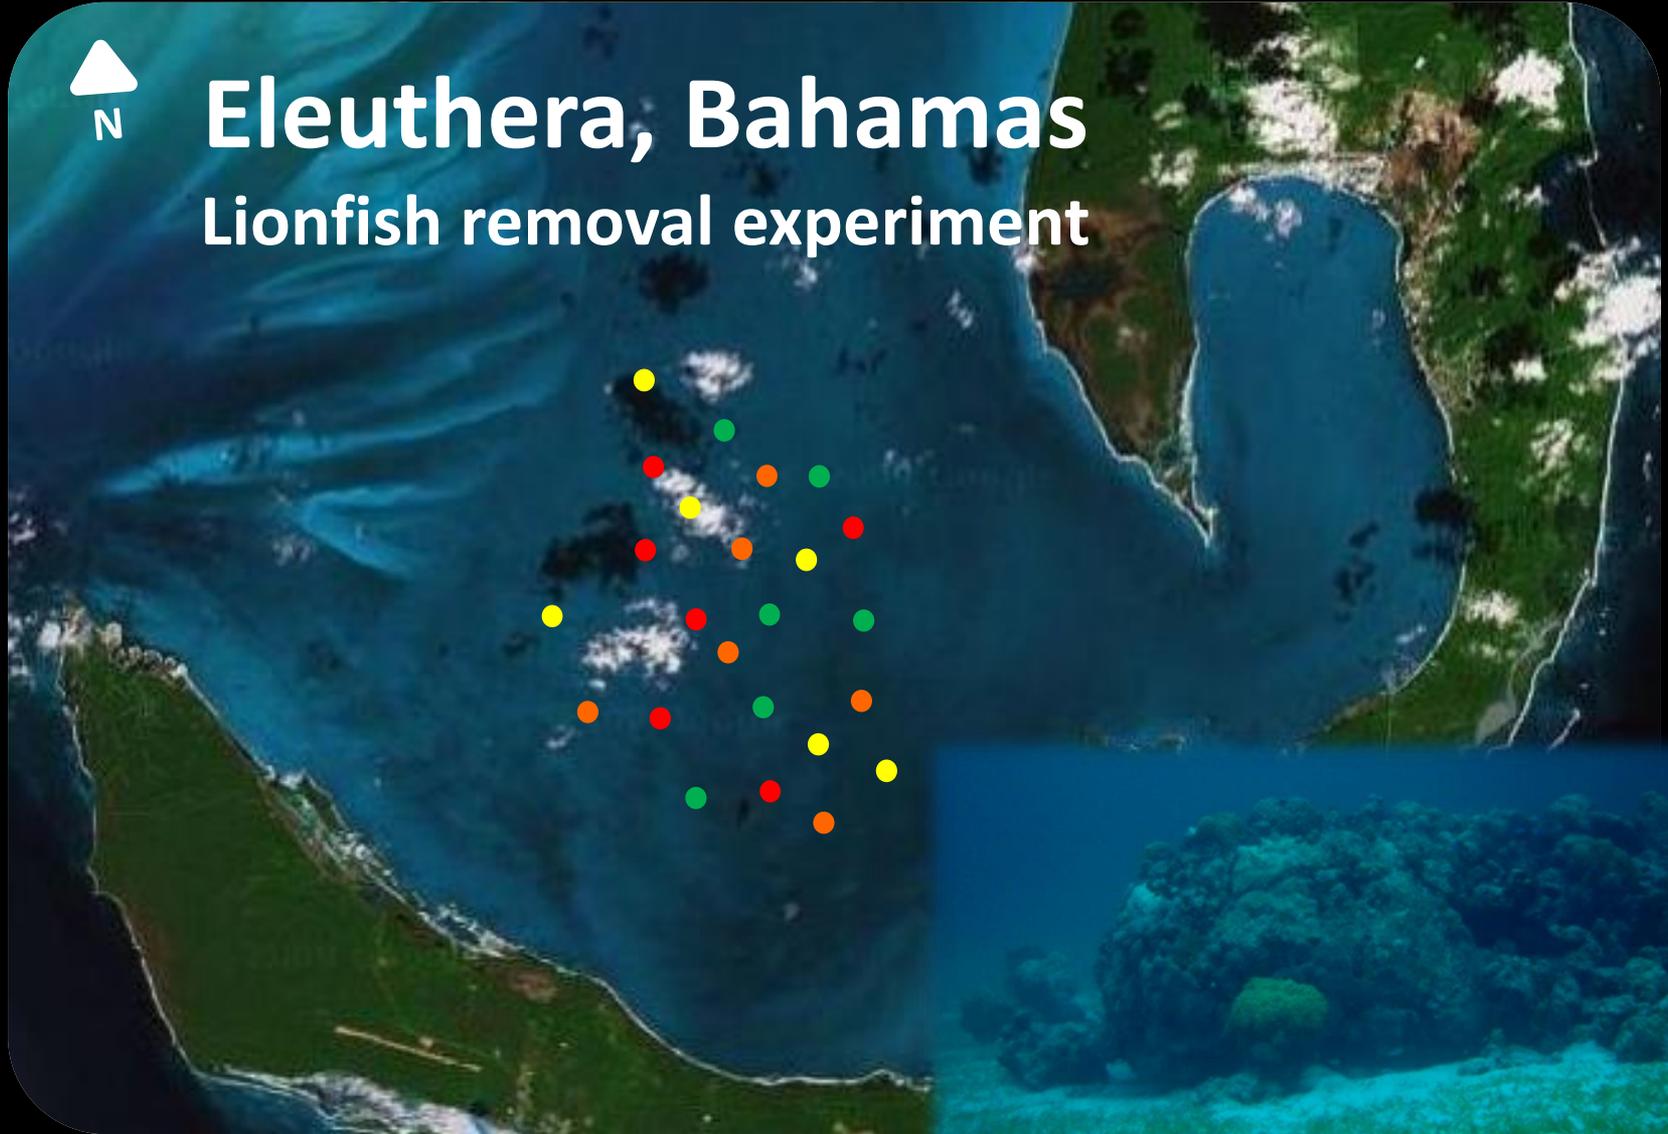

Eleuthera Island

# Testing targets for lionfish control

**Eleuthera, Bahamas**  
Lionfish removal experiment

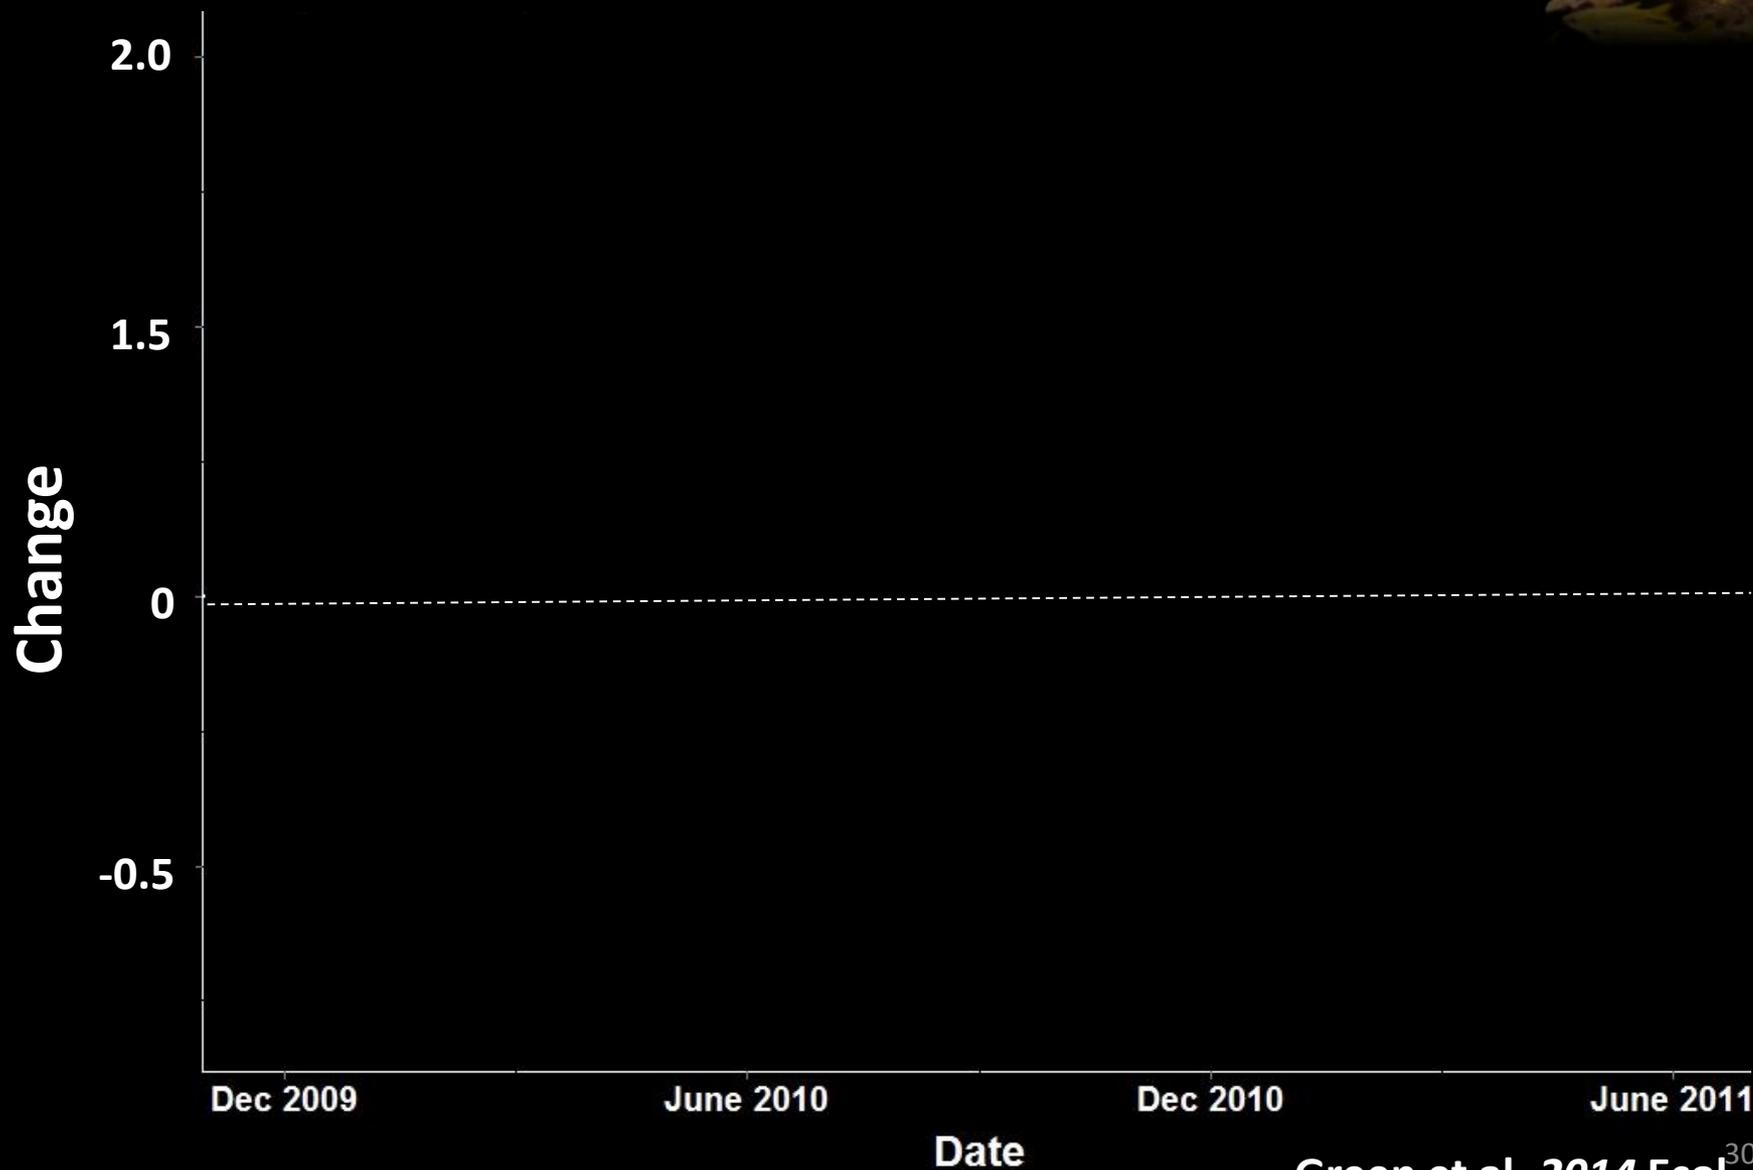

# Testing targets for lionfish control

## Two year removal experiment:

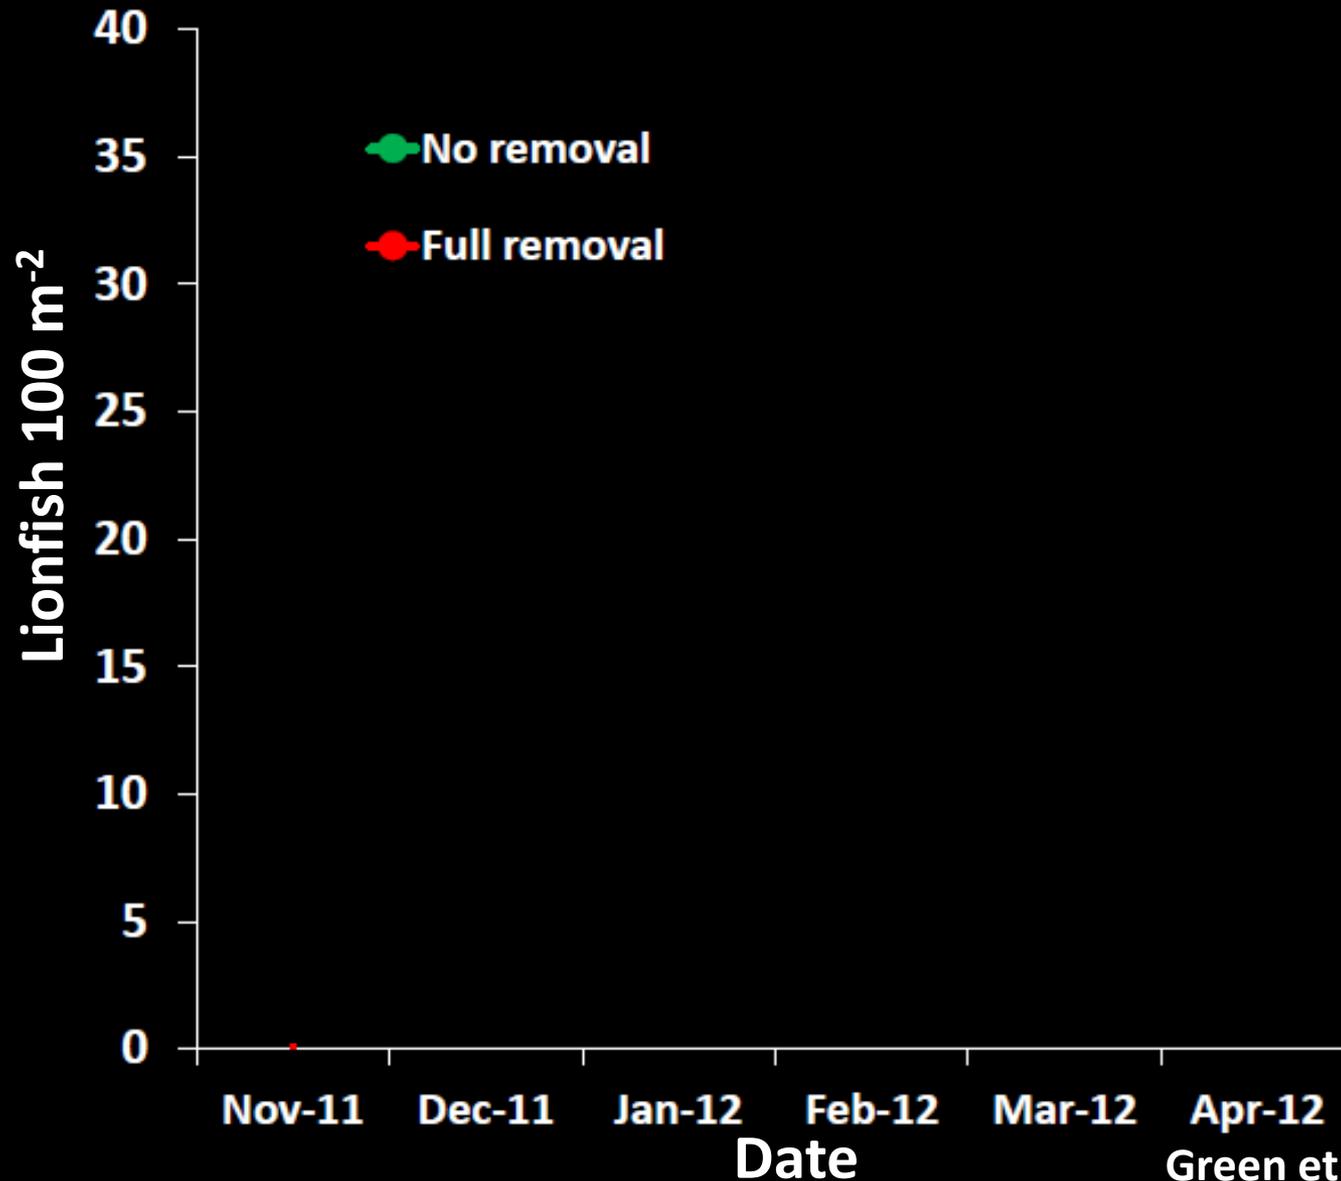

- Removed lionfish monthly to maintain four treatment groups
- Surveyed native fish community every six months

# Change in prey-sized fish (<15cm)

# Recolonization happens rapidly

**How often  
to remove?**

**What is the cost  
and effort needed  
for control?**

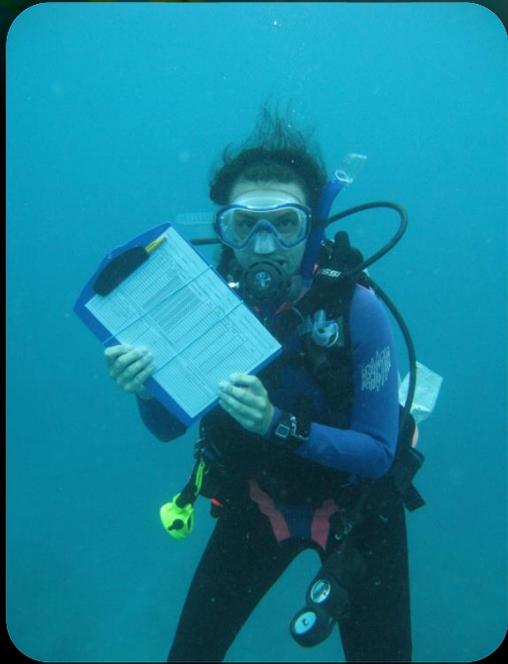

# Lionfish removal project

## Florida Keys

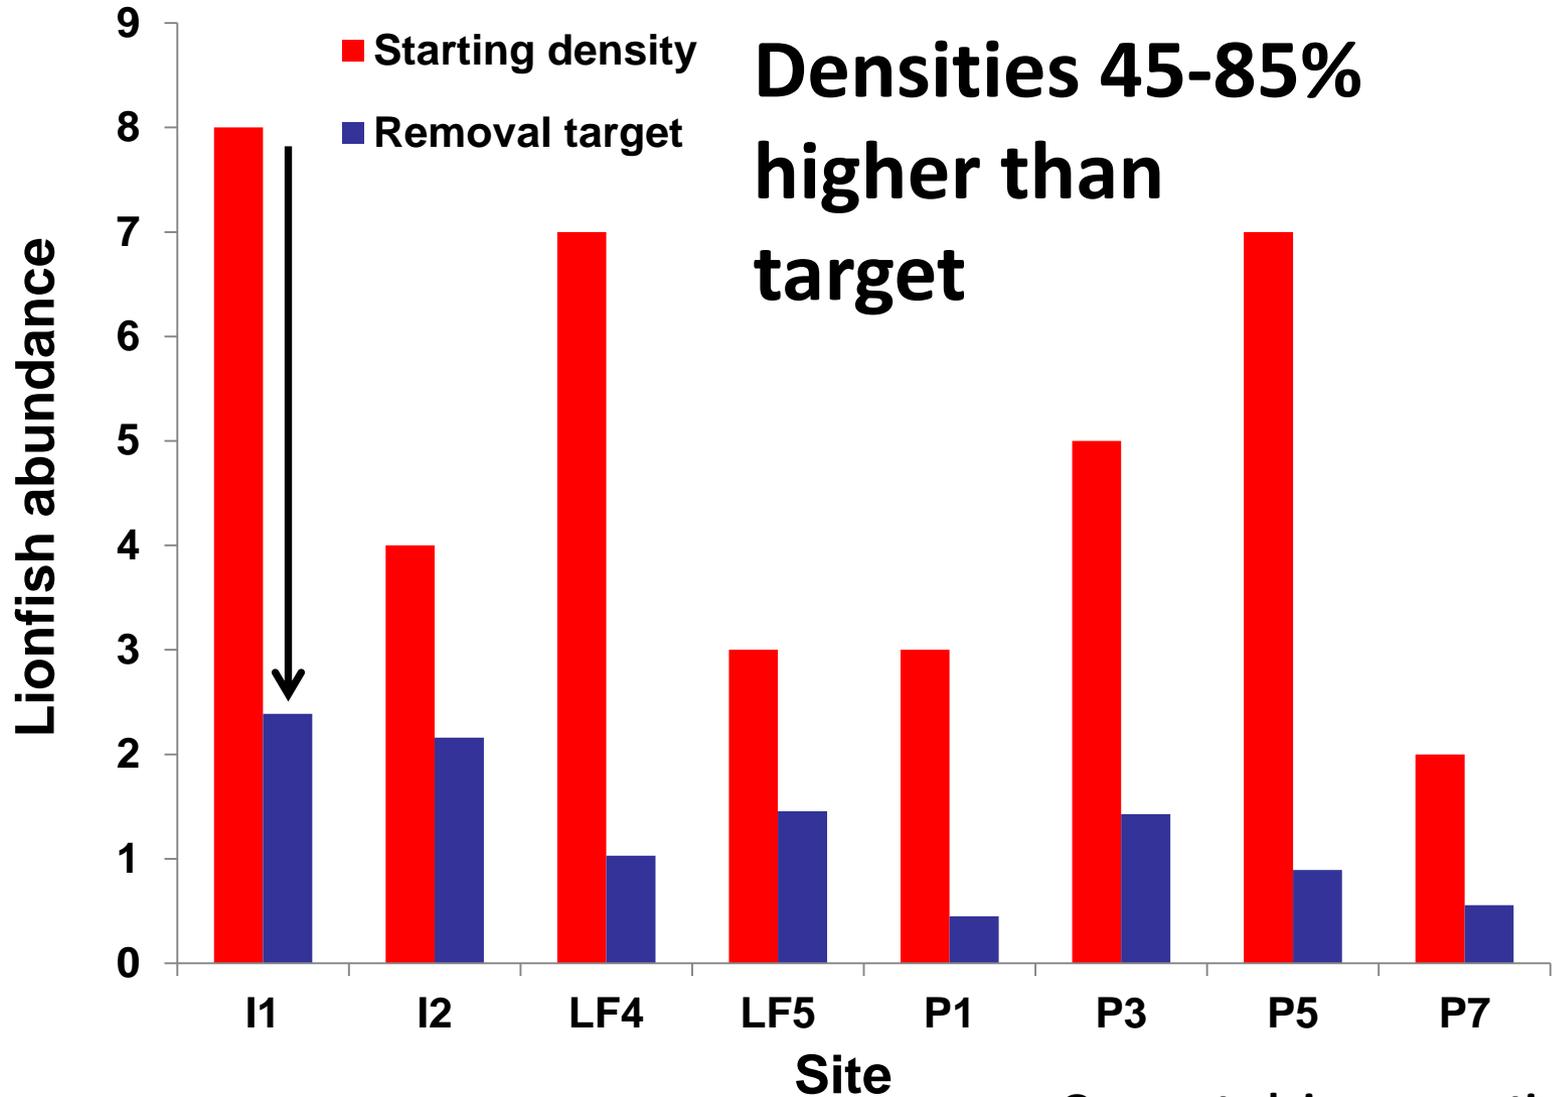

## St Croix, USVI

# Bi-monthly dives to survey and remove lionfish

# How many lionfish to remove?

Green et al. in preparation

# Tools to achieve control

**Derbies**

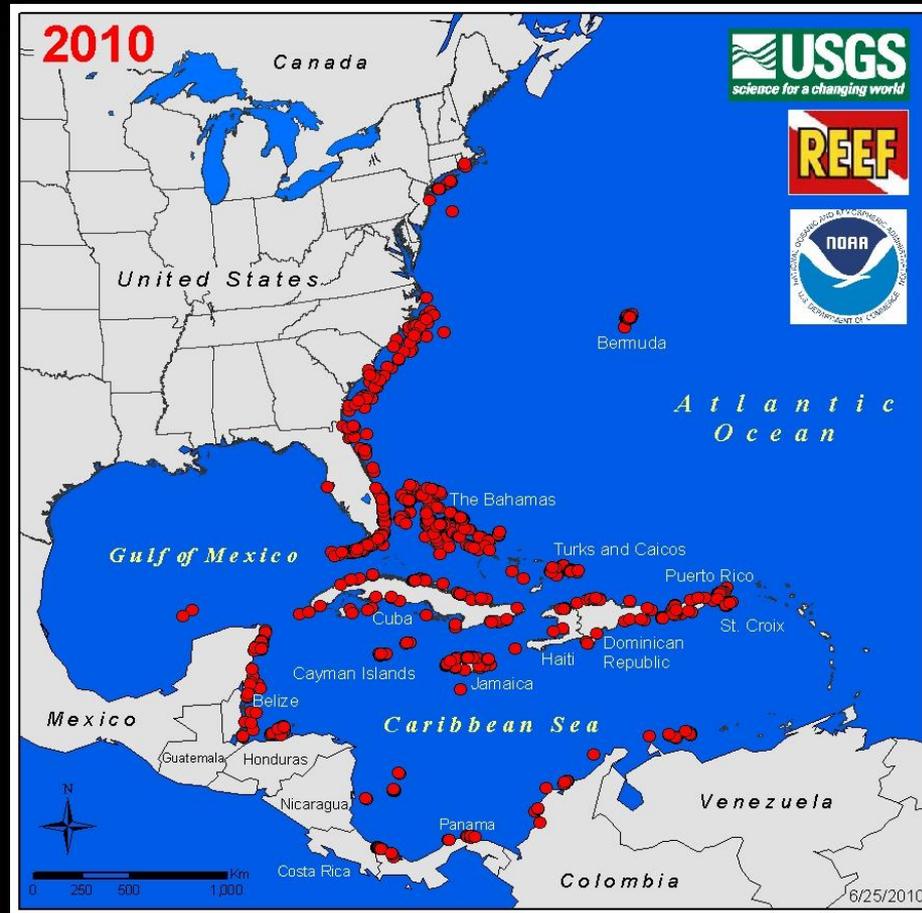

**Diver removal**

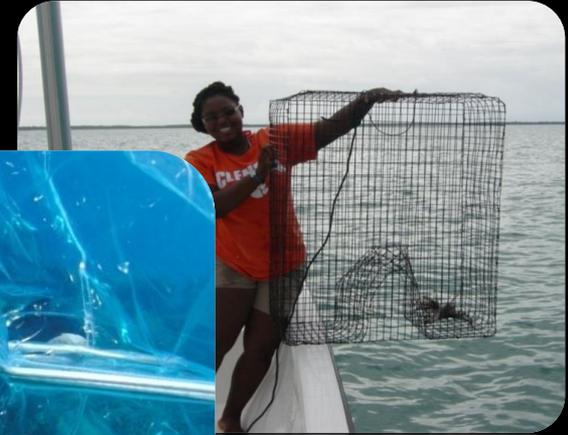

**Traps**

# Where do we get the manpower to achieve control?

# Tools for lionfish control

Primarily caught by spear and hand-net

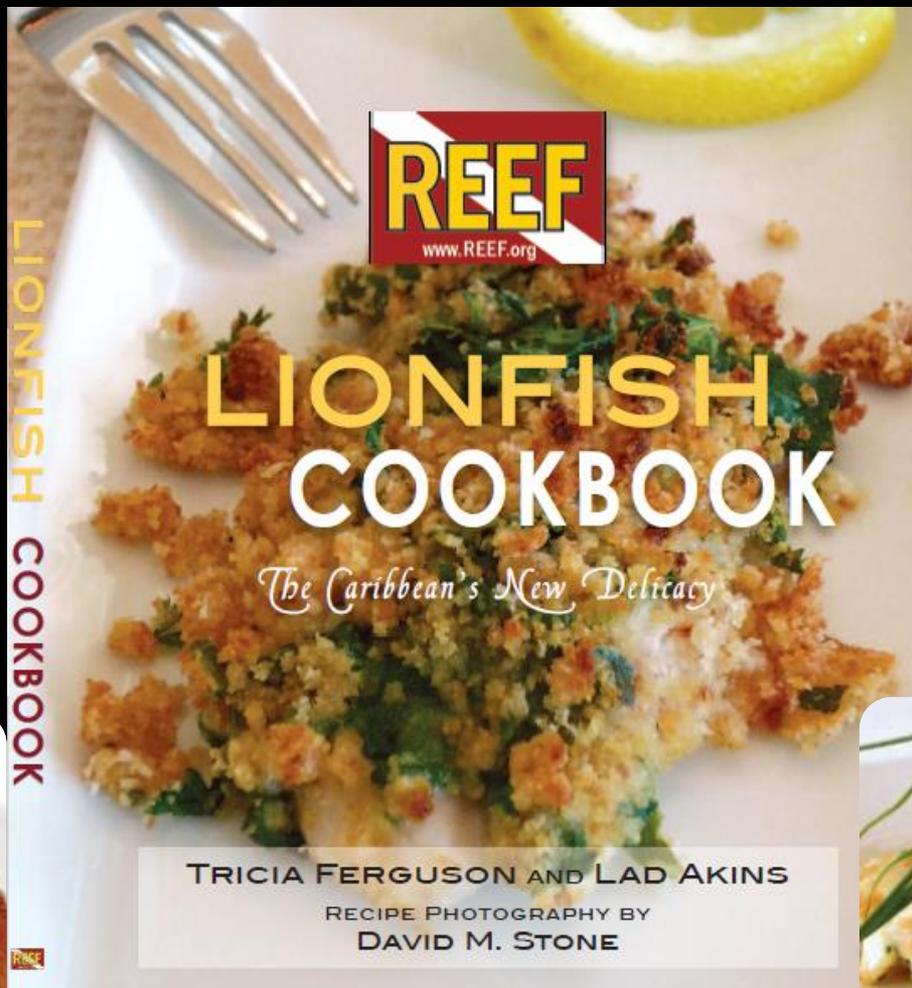

# Tools for lionfish control

## Food fishery

# Eat 'em to beat 'em!

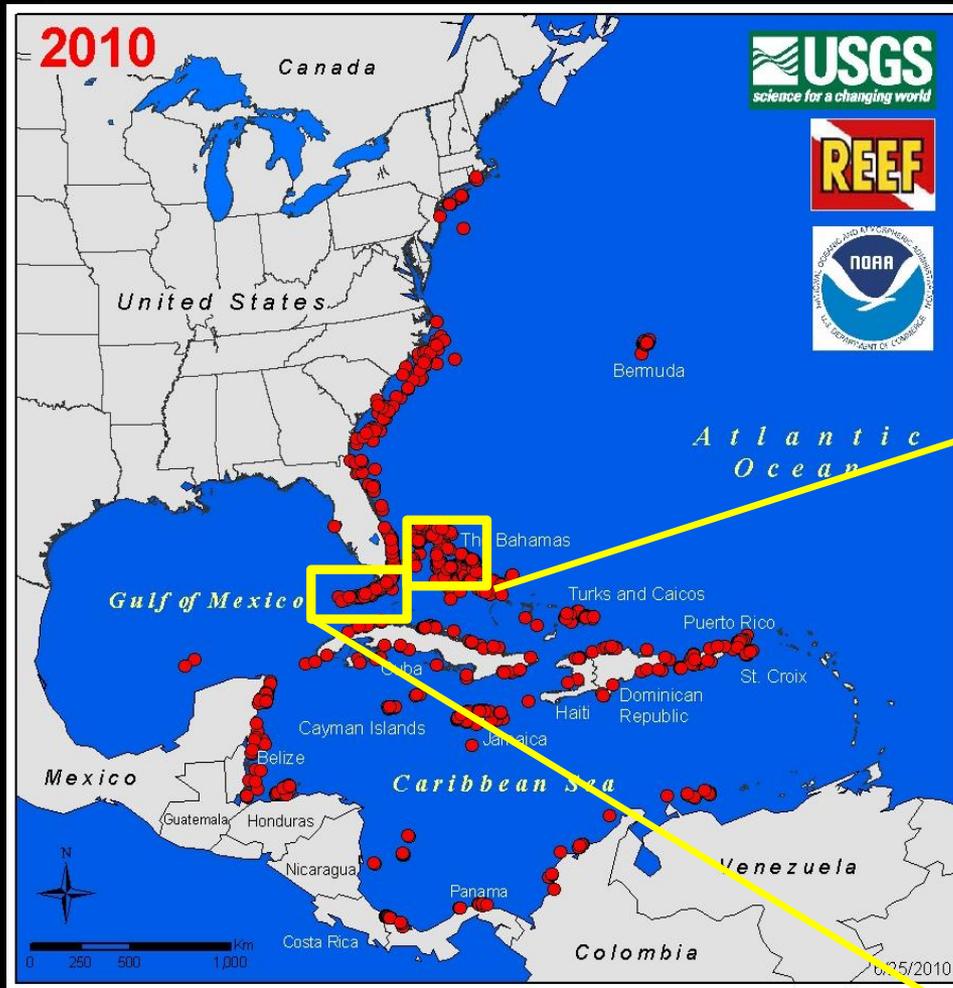

# Lionfish derbies

# Derby effectiveness study underway

Green Turtle Cay, Bahamas

Key Largo, Florida

# Population control

**Single-species population models  
identify mortality rate needed to  
cause population decline**

# Population control

**ERADICATION**

# When is eradication successful?

**Restricted geographic range**

**Small population size**

**Occupied habitats readily accessible**

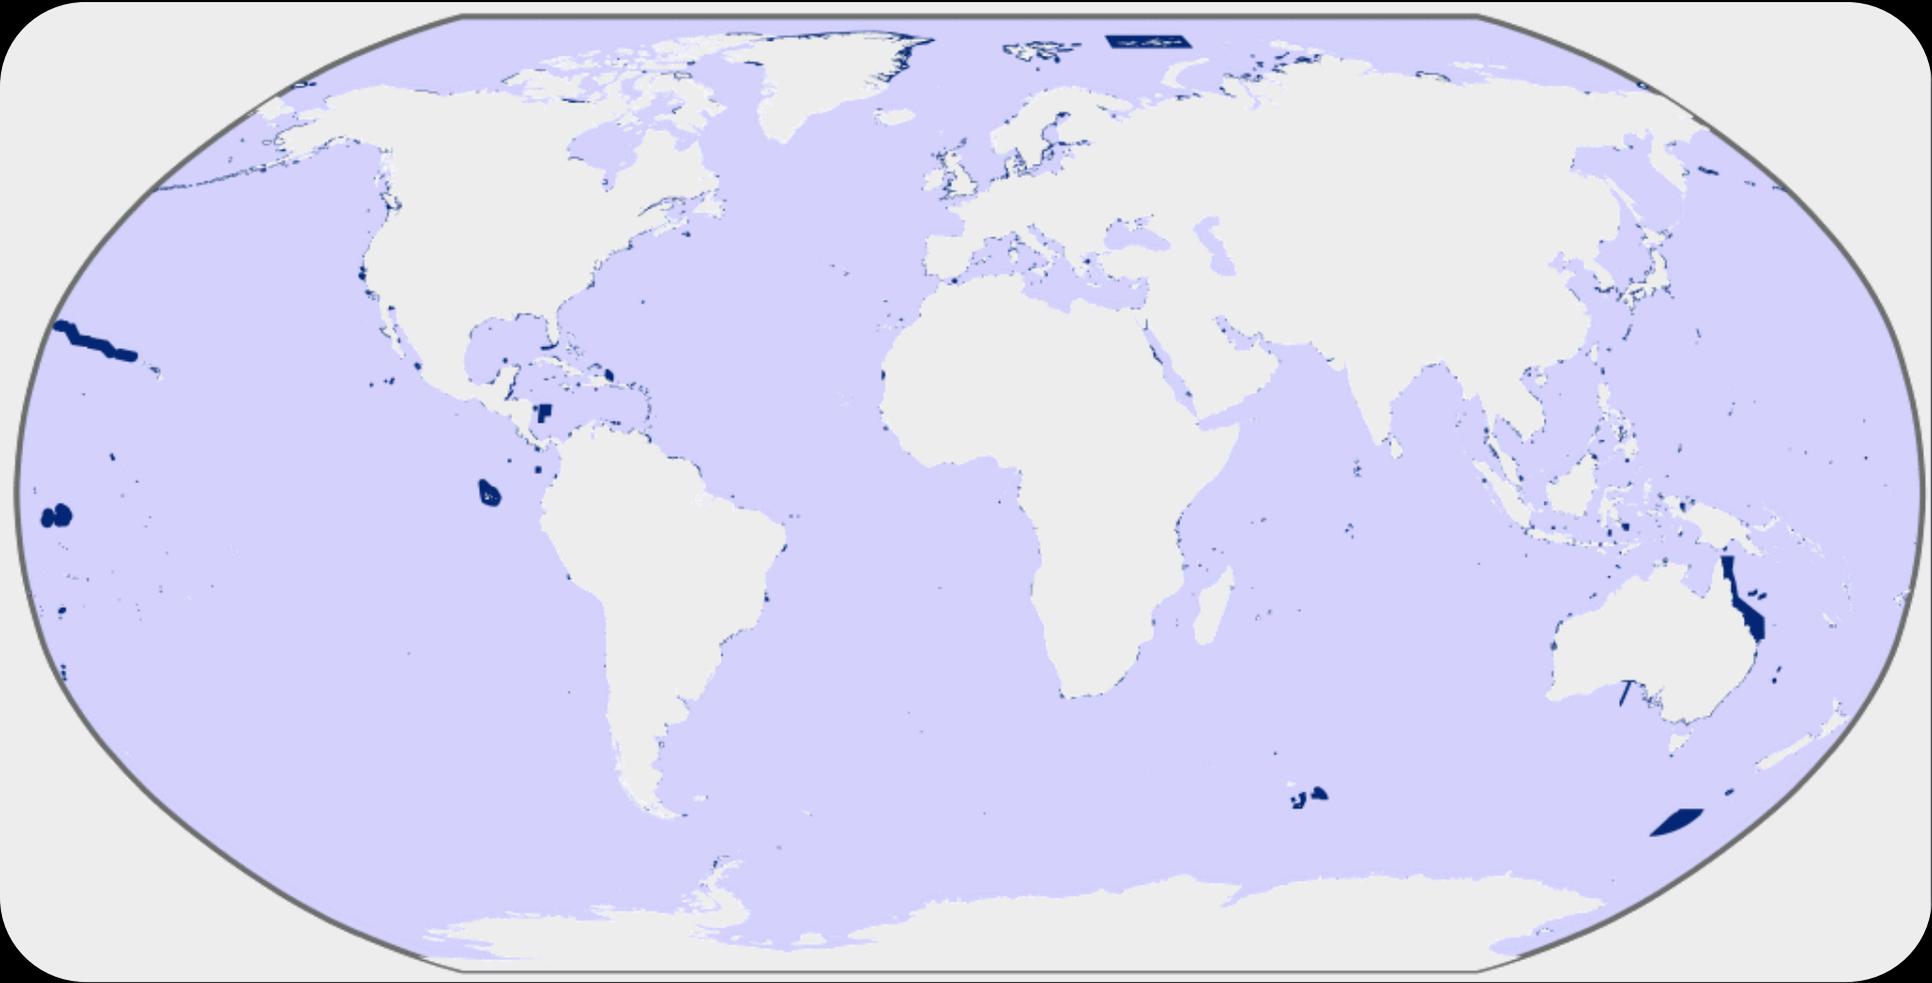

**Invader easily removed**

# Invasions in the sea

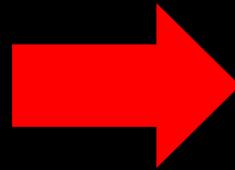

# Marine conservation occurs at a local scale

# A new approach to invasive species management

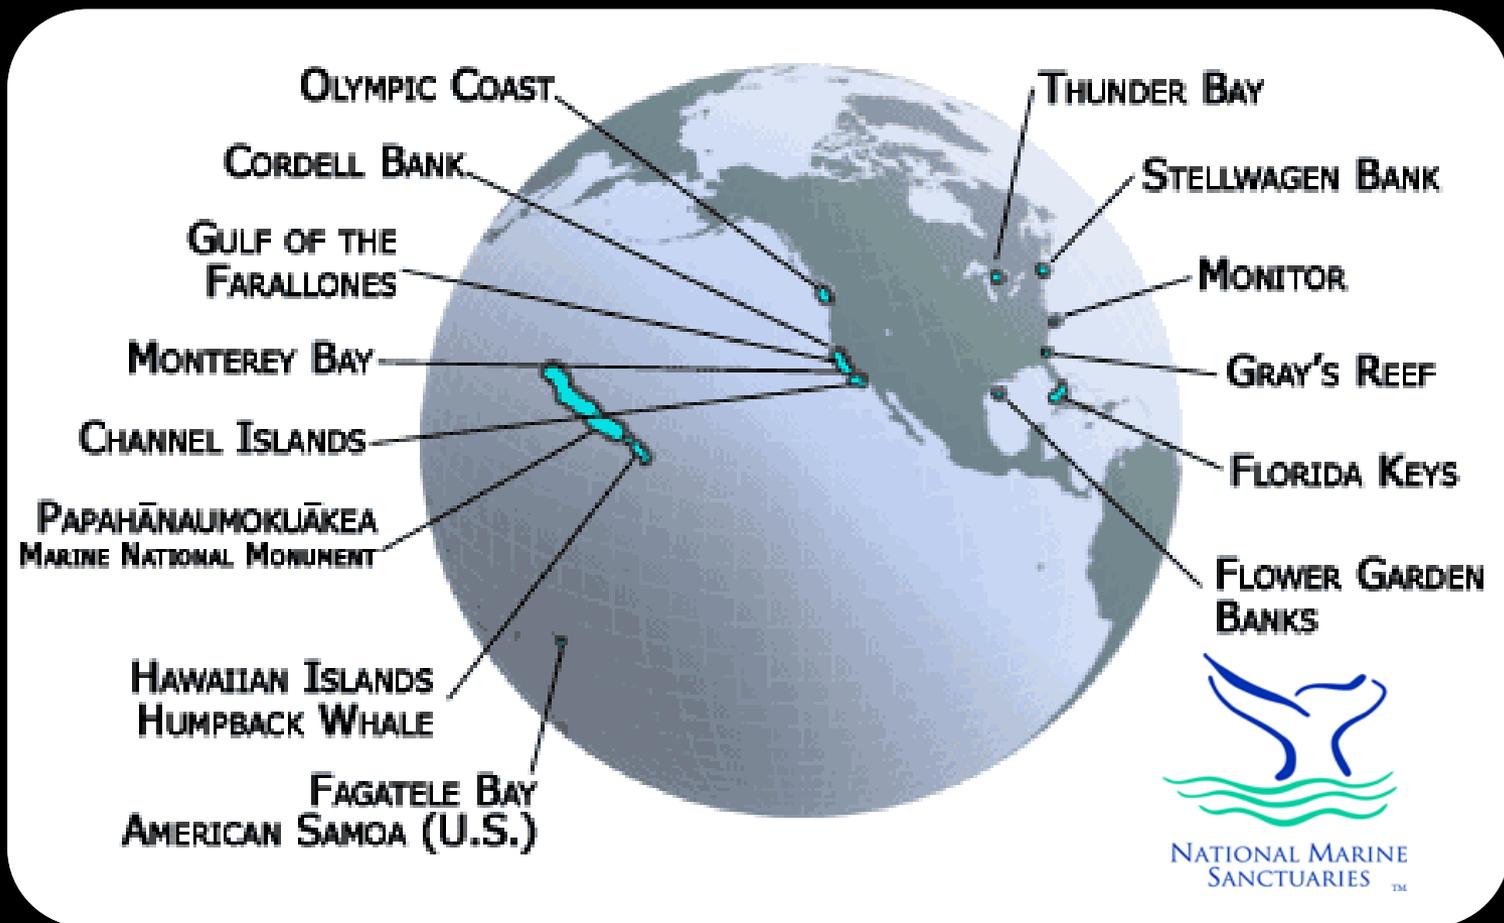

Numerical  
eradication

'Functional'  
eradication

# Invasion & US marine protected areas

AMERICAN SAMOA (U.S.)  
FAGATELE BAY

# Which marine invasions can be functionally eradicated?

**Aim 1: Identify predictors of eradication success**

**Aim 2: Determine candidates for functional eradication**

**Aim 3: Apply a functional eradication framework**

Green et al. in preparation

# Summary

- Eradication-focussed invasion management yields limited success in the sea
- Need alternative mechanistic approaches focussed on mitigating impacts in high priority locations
- Invasive lionfish are having significant effects on native fish community structure
- Controlling lionfish below predicted 'thresholds' densities can prevent ecological effects
